

Heartland Transaction Services

Payment Processing for Higher Education

Add Heartland payment processing to your TouchNet U.Commerce platform and you get Heartland Transaction Services, the most powerful transaction processing solution available to higher education today. TouchNet + Heartland provides colleges and universities unparalleled payment processing features that can be the cornerstone of any campus initiative to manage payment costs or improve transaction security. Only when you choose Heartland payment processing for your TouchNet U.Commerce platform can you realize these unprecedented payment processing advantages:

Synchronized Information

Access payment transaction details like you've never seen before with RECON 1™—synchronized information from your campus ERP systems, Heartland payment processing, and U.Commerce transactions. You can view trends or drill down to individual transactions in order to manage merchant fees and streamline reconciliation. More than anything, it's an information tool that helps you save time and money.

Open and Transparent Pricing

TrueCost+™ helps you understand the true cost of your payment processing. Heartland Transaction Services comes with open and transparent pricing. You can feel confident that you've limited your transaction costs to interchange fees plus fixed basis points – and easily verify what actual interchange fees were charged.

End-to-End Security

Heartland Secure™ combines three modern technologies—EMV, data encryption, and tokenization—to give merchants the best protection against card-present data fraud and point-of-sale (POS) intrusions. And it comes with a breach warranty, too!

Heartland Transaction Services

RECON 1 is a single place to go to gather data from your campus ERP system, TouchNet U.Commerce applications, and Heartland payment processing. It helps you run your business better and make tough chores like payment reconciliation and expense allocation a lot easier.

The Power to Know

RECON 1 is a powerful tool for business intelligence. Know your payment mix – which payment cards and ACH transactions you've processed. Track which merchants are active. Understand why merchant fees may have exceeded expectations. Analyze how to lower payment costs. RECON 1 gives you the power to know!

Easier Reconciliation

Finally, you can streamline your reconciliation efforts. RECON 1 gives you access to synchronized payment data like you've never seen before. Match settled payments to payments entered and to ERP postings in a snap from one single management tool.

Automatic ERP Integration

RECON 1 gives you what other processing services can't—the ability to tie settled transactions back to postings in your ERP system. Your U.Commerce platform provides the integration technology, and Heartland provides the processing data. Furthermore, you can post merchant fees automatically back to your G/L.

Streamlined Exception Handling

Significantly reduce the effort you expend handling payment card and ACH transaction exceptions. RECON 1 helps you investigate failed transactions and automates much of the process of voiding them. Your staff is more productive.

Inclusive MID Management

Track POS payments for all merchants and all devices. Even when a Heartland-approved point-of-sale device does not connect to any TouchNet U.Commerce application, its transactions are available for viewing through RECON 1, and its deployment on campus can be monitored through the Device Manager.
